

# COMPUTERIZED MAINTENANCE SYSTEMS

**iWorkWise computerized maintenance systems are the perfect answer for any company looking for a better solution for organizing and tracking their maintenance needs.**

These computerized maintenance systems generate work orders for you on a schedule that you set in advance, giving you peace of mind. You no longer need to worry about when maintenance is due. Work orders provide concise instructions to maintenance employees to execute the tasks, and store maintenance history information in easily retrievable formats. Want to know all the preventative maintenance and repairs that have ever been performed on a particular machine? It couldn't be easier; all the information is readily available for you in the program. Searching, viewing, sorting and reporting are flexible and simple.

**If you are struggling with the difficult task of managing a facility maintenance program, you would benefit from using today's technology to your advantage. We enter all of your equipment, tasks and instructions and formulate schedules based on your needs. This leaves you with a fully customized and functioning system that you can start using right away. We also provide training in the program and technical support for as long as you need it.**
